Ideation Phase
Define the Problem Statements

Date	20 Feb 2025
Team ID	
Project Name	Strategic Product Placement & Sales Analysis (FMCG Sector)
Maximum Marks	2 Marks

Problem Statement 1 (PS-1) - The Placement Issue

- **I am (Customer):** an FMCG Retail Store Manager.
- **I'm trying to:** decide exactly where to place high-margin products (like Food or Electronics) to maximize overall sales volume.
- **But:** I don't know if 'Front' or 'End-Cap' shelf placement actually drives more impulse buys compared to standard 'Aisle' placement in low-traffic zones.
- **Because:** I only have access to raw sales data in massive CSV files and have no way to visually analyze the correlation between foot traffic and shelf position.
- **Which makes me feel:** overwhelmed by the sheer volume of data and frustrated that I have to rely on intuition and guesswork instead of hard facts.

Problem Statement 2 (PS-2) - The Promotion Issue

- **I am (Customer):** a Category/Marketing Planner for an FMCG retail chain.
- **I'm trying to:** allocate promotional discount budgets effectively across different product categories to clear inventory quickly.
- **But:** I am wasting money running discounts on categories where promotions actually decrease overall revenue or brand perception.
- **Because:** I cannot easily see the "Promotion Paradox" (e.g., how promotions negatively impact Clothing sales but boost Food sales) without an interactive, cross-filtered analytics tool.
- **Which makes me feel:** stressed about shrinking profit margins and insecure about defending my pricing strategy to upper management.
